PREFACE

For the reader who wishes to see this book as the author sees it, the following statement of its main characteristics may be helpful:

1. The work is divided into three divisions.
2. It is an educational book rather than a social science book.
3. The Selected references for the various chapters have been chosen as follows:

MYSTIC ASTRONOMY

The object of this work is to assist in the clarification of some of the mysteries of the heavens around us.

We undertake the solution of problems in astronomy, (one of the sublime sciences) which baffles our modern scientific mechanics. We sincerely hope that we may shed a little light along the path onward to a higher understanding of our universe, so we may become (super-men) of Aquaria.

The medium of explanation of these problems, is accomplished by the method of answering questions, presented by the exponents of this work.

UZICAN SCIENCE

The object or motivating spirit for presenting this work, is to elevate the old science of the Stars, generally known as Astrology, out of the category of superstition and degradation it has been subjected. A lost art that has been relegated to pseudoism. An art that was highly developed and understood by the early Egyptian civilization. An art that was highly practiced by Abraham, the Sons of Seth, Job and many more of the scriptural writers.

We read in the book of Job, "Knowest thou the ordinances of the heavens? Can'st Thou bind the sweet influences of the Pleiades, or loose the bands of Orion?"

Cans't thou bring forth Mazaroth in his season, or cans't thou guide Arcturus with his Son's?"

We will recede into great ages passed away, and proceed up into the distant future, into the Aquarian age when Astraea will return to Earth and the Golden Age, will become a reality to the peoples of the Earth.

In this work is attempted the solution of some of the mysteries in the Pyramids and Sphinx of ancient Egypt. Astronomical charts are presented on the origin and evolution of the Pyramid, and the master key numbers, concealed by the silent Sphinx, for a perfected astronomy is revealed.

We sincerely hope we may bring light and spiritual enlightenment to whom-so-ever may contact this book.

THE MYSTIC PYRAMID

We will reveal in this work some of the scriptural and astronomical truths of the Great Pyramid of Giza, Egypt, "The Flower of The Nile".

We will reveal magnetic measurements of the heavens and its motions, which are accurately measured and recorded in the great pyramid. We will reveal astronomical measurements of the heavens, measured from the four cardinal stars, measurements that the modern astronomer dare not hope to accomplish with his scientific astronomical mechanics.

We will reveal the true length of the Sacred Cubit, which varies as the solar system translates the great Sidereal Zodiac. Probably the most intricate magnetic measurement in the Solar Zodiac.

We will reveal measurements in the pyramid of the Sacred Cubit's true magnetic length, when it was erected, which designates the time of its construction. All measurements in this spiritual astronomical symbol, all the way from the sub-base line to the very apex, reveal this truth.

Our purpose in presenting this work is to reveal the absolute truths of the Christ teachings. We read in St. Matthew's Gospel, the twenty-first chapter, the forty-

second verse—Jesus said unto them, “Did ye never read in the scriptures, the stone which the builders rejected, the same is become the head of the corner, this is the Lord’s doing and it is marvelous in our eyes. (43rd.) Therefore say I unto you, the Kingdom of God shall be taken from you and given to a nation bringing forth the fruits thereof. (44th.). And whosoever shall fall on this stone shall be broken, but on whomsoever it shall fall, it will grind him to powder”.

We read in the book of Job, the thirty-eighth chapter, the fourth verse—“Where wast thou when I laid the foundations of the earth? Declare if thou hast understanding. (5th verse). Who hath laid the measures thereof, if thou knowest, or who hath stretched the line upon it? (6th verse). Whereupon are the sockets thereof made to sink? or who laid the corner stone thereof? (7th verse)—When the morning stars sang together, and all the Sons of God shouted for joy”.

We sincerely, and truthfully reveal the Christ teachings will be fulfilled through the Great American Emblem, “The Stars and Stripes forever.”

W. CHAS. PATTI

Los Angeles, California.
June 22, 1936.

MYSTIC ASTRONOMY

WHAT IS ETHER?

This universe of ours, in which all Stars, Comets, the Sun, Planets and our Earth including all other substantial bodies; have motion, is inter-penetrated with ether. Ether has no confined limits. Having extension beyond all interstellar space, into infinity. Ether is not a substance. We may call it the agency or medium of God's manifestation throughout our most beautiful and sublime universe.

WHAT ARE LINES OF FORCE?

All material or substantial objects, or bodies in motion through-out the universe cause a distortion of ether, depending on their velocities, sizes, masses, densities, distances, etc. This distortion creates magnetic lines of force.

WHAT IS MAGNETISM?

These lines of force are made perceptible on our planet by what we call magnetism. Any one who possess knowledge of electricity is familiar with lines of force and magnetism. They are the fundamentals of Electricity, and the medium of gravitation.

WHAT IS GRAVITATION?

The magnetic qualities, or properties which a body in motion possesses, without any question of doubt, is its gravitational force, to attract or repel.

This is the great law which keeps the bodies of our solar system, in their marvelous and uniform motions, throughout all time and space into infinity.

WHAT ARE VORTEXIAS?

The relative motions of the bodies of a system, relative to all other bodies of other systems generate powerful

magnetic currents in all bodies, proportionate to their velocity, mass, density, volume, distance, etc.

These magnetic currents that influence a body, from a particular direction, are a magnetic vortexia. All bodies possess unlimited numbers of vortexias. The power of these vortexias depend on the relative number of lines of force on a body from all distant ones. Some vortexias are more powerful than others, never remaining permanent in a particular point of direction. The magnetic needle which has a tendency to point to our north pole, continually oscillates, increasing during the morning hours after sunrise, and decreasing after the Sun has passed the meridian in the afternoon. Repeating the same fluctuations during the night in a similar manner. The needle now points west of the true north, receding towards the north as the years pass by.

The earth's primary vortexia has a general direction of north and south. In its very center or core its magnetic force is most powerful. Its true center is removed from the true diametrical center due to the forces of other bodies of the universe, particularly the Sun and our neighbor the Moon, who exerts the greatest influence with one addition, another body which is also a satellite of the earth. We will deal with it later on.

Following is a diagram to illustrate the primary vortexia of mother (earth)? (*For reference see Chart No. 1.*)

The magnetic currents take a general direction from the star (Polaris), our present pole star and move in a spiral direction to the magnetic center of the earth, where they converge in a focus, and then expand spirally toward the South celestial pole in the southern heavens. At the year of nineteen hundred and ninety-three (1993), the magnetic needle will point approximately true north. This will be due to the supposedly-recession of the equinoxes, which will bring the Star Polaris about true north.

At that period we will receive the direct influences of the Pole Star. We will deal with the illusion of the precession of the poles later.

CHART No. 1
ILLUSTRATING MAGNETIC VORTEXIA

Remember the earth has an unlimited number of vortexias penetrating its magnetic central core from all conceivable directions.

HOW FAR FROM THE SURFACE OF THE EARTH DOES ITS MAGNETISM EXTEND?

Cammile Flammarion the great French Astronomer, had mathematically calculated our extreme atmospheres at approximately twenty-six thousand two-hundred and forty (26,240) miles. At approximately twenty-six thousand one-hundred and thirty-six (26,136) miles is the distant belt of the heavens, where our magnetism is neutralized.

WHAT IS LIGHT?

Light is a high oscillatory vibration caused by magnetism. Therefore light can only be made manifest where lines of force produce the proper magnetic vibrations.

WHAT IS DARKNESS?

Darkness is exactly the same as light but the vibrations are of a lower order.

Now we are arriving to the analysis and understanding of one of the mysterious phenomenas of the heavens. Remember light manifests only where the magnetic conditions are favorable. At approximately twenty-six thousand one-hundred and thirty-six (26,136) miles our magnetism has reached the point of the heavens where light does not manifest, due to magnetic neutralization. At this distant belt light is translated into invisibility.

DOES THE EARTH RECEIVE LIGHT OR DARKNESS FROM THE SUN?

We must answer in the negative. No! This is not in accord with accepted theories of Astronomy, but (never-the-less) true. All the light, heat, and all other manifestations on earth are caused by the magnetic or gravitational forces exerted on it by other bodies of the heavens. Of course the Sun is the principal body that

magnetically brings about the manifestation of day and night. So light and darkness are properties of mother earth.

Now we will deal with a problem that may startle the student indeed.

DOES THE EARTH HAVE MORE THAN ONE SATELLITE OR MOON?

Yes! Its name is "Lilith". Why has it not been observed with the telescope? Because it has an orbit distant from the earth at approximately twenty-six thousand one hundred and thirty-six (26,136) miles, in the belt of the heavens we have just described, where light ceases to be, and invisibility prevails.

All bodies having orbits at this distance from the earth become invisible. Remarkable! Almost unbelievable! But a real truth indeed. "Lilith" has been observed many times in the last three centuries. One French astronomer observed it a large number of times, and other astronomers likewise. So now we have an invisible satellite, named "Lilith". It is observable only when it transits the disc of the Sun. Previously and immediately after its transit it is invisible, due as we said before, to the lack of magnetism at that distance from the earth to produce the phenomena of light.

Now this Satellite "Lilith" revolves in its orbit in approximately eleven (11) days. So mother earth has two moons, or satellites. Before we proceed to other problems of Mystic Astronomy, the astronomers who have seen this orb pass over the disc of the Sun, suspected that they were possibly observing the supposedly planet (Vulcan), a problem we will deal with later. One astronomer went so far as to compute an orbit for it, and determine its next transit. But unfortunately it did not transit as he had computed.

IS RELATIVITY A REALITY IN THE UNIVERSE?

Yes, indeed, very much so! All magnetic conditions of one body are translated to all the rest of the bodies,

and vice-versa. According to the nebular theory of the formation of a system all bodies are relative in all material substance and manifestations. As the old hermetic law goes, "As above, so below".

There is no doubt what-so-ever as to the truth of the nebular theory. As all bodies proceed from the one, they all partake of the same spirit and substance or matter.

We have now over ninety (90) distinct elements within our earth. This condition also prevails in the Sun, and all the planets and their satellites in our Solar System. The earth manifests light, heat, and all other forces it has of its own substance or matter as we explained earlier by magnetism, translated over the ethers by lines of force which are generally known as gravitation. The Sun and the rest of the planets do like-wise, generate light, and other manifested conditions, due to their own vortexias, of magnetism, relative to other bodies, of the heavens.

All bodies in the universe are relative. The theory of relativity proves its-self everywhere in nature, as has been revealed by the great genius Einstein.

ARE PLANETARY AND STELLAR MEASUREMENTS REAL OR AN ILLUSION?

According to the law of magnetic vortexia which we have just explained, all these measurements are illusory. Suppose we turn the telescope at total eclipse towards the Sun, and observe the magnificent beauty of color revealed to us by the corona. What do we actually observe? Our own light! Caused by the translation of the Sun and Moon's magnetic vortexias, which are translated to our own magnetic vortexias. This is not in accord with accepted astronomical theories, but never-the-less true.

All planetary and stellar measurements are relative to our own measurements within the confines of our magnetic vortexias.

DO ALL PLANETS HAVE LIFE MANIFESTATIONS?

According to the laws just expounded, Yes!

All planets have life of some form manifested on them. Otherwise relativity would not be in accord with the other theories just expounded. We have records of ancient days where people of other planets visited the earth.

The Astronomer and Astrologer Cardan, supposedly had a visit by two men from the moon. This may be true. The exponents of this work remain noncommittal.

DO THE DISTANT STARS INFLUENCE THE SOLAR SYSTEM?

Yes. All the stars exert influence on our system, as we have previously stated, according to the power of their magnetic vortexias or gravitational forces of attraction and repulsion.

We will now proceed to deal with a problem that will startle the student indeed.

HOW MANY DEGREES ARE THERE IN A CIRCLE?

The answer to this question will no doubt confound the geometricians. There are three-hundred and sixty-three (363) degrees in a perfected circle. The number of degrees in the circle has come down to us from great antiquity. Much older than the earliest astronomical measurements of the Moon, which some learned astronomers would lead us to believe. Man made his first astronomical measurements, when he wondered in amazement at that luminous disc that passed over his head daily—the glorious Sun, of the Heavens. He gauged his activities according to the orb of Light. Eventually he marveled at the orb of Night, the Goddess Diana or the Moon. Finally by continually combating the elements he arrived at an intellectual plane of being, able to comprehend the change of seasons. Eventually the truth dawned on him that the seasons were in accord with the motion of the Sun through the Heavens daily. As time proceeded he came to realize that the Moon also had its

part to play in the great drama of life. Finally he became intelligent enough to measure the seasons in accord with the number of times the Sun passed over the Zenith or Mid-heaven. This has been the source and origin of the number of degrees in a circle.

The early Egyptians measured the seasons with three-hundred and sixty (360) passages of the Sun over the Zenith which was quite accurate for that remote date. Before proceeding, there is no doubt whatever that the Egyptians had a most remarkable understanding of the motions of the heavens. It is evident to anyone who delves into the symbolism of the Heiroglyphics and Archaeology of the early Egyptian civilization. Today there stands a perfected monument possibly the oldest monument on Earth, oriented astronomically, in such a manner, that one who has the key, and proper knowledge may use it to measure past ages, and future ages to come. Such is the wisdom of the Heavens the Egyptians possessed. Also we must mention the Pyramids, particularly the Pyramid Cheops or Khufu. The Pyramid Khufu is also of great antiquity, but of a later civilization. All the Pyramids were oriented to certain Stars of the Heavens. Our reason for calling particular attention to the Pyramid Khufu, is, while delving into its veiled secrets, there was presented to us the necessary knowledge to measure a perfected circle, which consists of three hundred and sixty-three (363) degrees. Before we proceed with the circle of three-hundred and sixty-three (363) degrees, we must also state at this time that a cubit which was a measurement in common use amongst the Egyptian astronomers consisted of twenty-one (21) and a fraction of an inch. Today this same cubit is the approximate equivalent of twenty-two (22) inches. To be accurate at the year of four-thousand four-hundred and twenty-seven (4427) A. D., the cubit will be exactly twenty-two (22) inches. This is due to a motion of translation of the solar system, of which we will deal with later. Our next question is:

IS THE PRECESSION OF THE POLES A REAL MOTION?

The answer is: It is an apparent illusion. It is not a real motion but only apparently so. The accepted theory of Astronomy, is put in this manner: the earth has an apparent motion similar to the slowing down of a spinning top. Through its translation with the Sun throughout a period of approximately twenty-five thousand eight-hundred (25,800) years, (a point where most astronomers are at a variance), a complete circle of the ecliptic is made.

Now let's go back to the Sphinx, the great silent mystery that unfolds its secret wisdom to the fortunate possessor of the key. Through the good fortune we had in measuring some of its mystic astronomical symbols, there was presented to us the accurate number of years in a perfected sidereal year. A perfected sidereal year consists of twenty-six thousand one-hundred and thirty-six (26,136) years of perfected three hundred and sixty-three (363) days, measured in a circle of three-hundred and sixty-three (363) perfected degrees. This is in our estimation the most remarkable of all astronomical units of measurement.

As we proceed, we ask another question.

DOES THE SOLAR SYSTEM REVOLVE IN AN ELLIPTICAL ORBIT WITHIN THE ZODIAC?

No doubt the student has a clear understanding of the Zodiac. For those who do not, we will clarify the position of this belt. It is a belt extending approximately eight (8) degrees on either side of the ecliptic, the Sun's apparent path around the Heavens, annually. Now to get back to the question's answer. Yes, the Sun with all his family of planets revolves around an orbit in exactly twenty-six thousand one hundred and thirty-six (26,136) perfected years.

Modern astronomy divides the Zodiac in twelve (12) divisions of thirty (30) degrees each, giving us a total of three hundred and sixty (360) degrees. Each sign is

represented by a constellation of Stars, bordering on the Zodiac. One of these signs is out of harmony in the Zodiac as constructed. This is the sign Libra represented by the Scales. There are only eleven true signs in the Zodiac.

We will name them, commencing with Aquarius. The reason for this we will clarify or explain later. In their true order they are Aquarius, Pisces, Aries, Taurus, Gemini, Cancer, Leo, Virgo, Scorpio, Sagittarius, and Capricornus. In some of the ancient Zodiacs the sign Libra was omitted.

A circle of three hundred and sixty-three (363) degrees distributed equally amongst eleven (11) signs, will allot to each sign thirty-three (33) degrees. This is a perfected Zodiac, absolutely in accord with a great sidereal year of twenty-six thousand one hundred and thirty-six years.

We must return to the translation of the Solar System in its orbit. The Solar System's motion in its orbit, in the same direction, as the apparent precession of the poles, produces that illusory phenomena of precession. During this great Sidereal year the magnetic vortexias of the earth, causes it to incline toward the Sun from the North, similar to having too much over-balanced weight at the top, giving it a tendency to fall toward the Sun. Of course it does not do this or it would be the end of Mother Earth for all Eternity. During this translation the Earth turns over exactly three (3) degrees of a perfected circle of three hundred and sixty-three (363) degrees. This motion causes our North Pole to subscribe a circle in the upper Heavens of approximately thirty-four (34) degrees. Having some variation due to the translation of magnetic vortexias, it may not exceed thirty-seven (37) degrees.

No doubt the student is aware of the fact we are dealing with measurements beyond astronomical mechanics. This orbit of the translation of the poles varies considerably from accepted measurements by astronomical mechanics. By the proper application of mathematics to

a great sidereal year of twenty-six thousand one hundred and thirty-six perfected years, we calculate the poles have an apparent precession along the ecliptic. This measure is equal to fifty (50) seconds per year of a perfected circle of three hundred and sixty-three (363) degrees. The Earth also has another apparent motion, called the variation of the obliquity of the ecliptic. Again by applying the proper mathematics to the great sidereal year of twenty-six thousand one hundred and thirty-six years (26,136) we find this motion is equal to forty-two (42) seconds per century of a perfected year of three hundred and sixty-three (363) days.

These units of measurement are of perfected accuracy. We do not ask the student to believe. Absolutely not. Prove for yourself. We have presented you the key. And we sincerely hope you will make use of it.

We will now proceed to one of the most difficult measurements of the Solar System's translation, a measurement that cannot be demonstrated by astronomical mechanics. First of all we will ask a question.

WHERE IS THE SOLAR SYSTEM, OR RATHER WHAT IS ITS APPROXIMATE DEGREE OF LONGITUDE IN ITS ORBIT?

Following is a simple chart which will make it readily clear. (*For reference see Chart No. 2.*)

The eleven (11) proper signs are represented by their astronomical symbols. Thirty-three (33) degrees is the proper number allotted to each sign.

If we divide the great sidereal year of twenty-six thousand one hundred and thirty-six (26,136) years by eleven (11), the proper number of signs, we have a total of two thousand three hundred and seventy-six (2,376) years. So the Solar System transits a sign in two thousand three hundred and seventy-six (2,376) years, or makes a complete translation of its orbit in twenty-six thousand one hundred and thirty-six (26,136) years.

The method employed to measure the Solar System's present position in its orbit, we must refrain from pre-

senting to the student at this time. The time and occasion do not permit us to do so.

We will proceed to our next question.

HAS THE SUN ONLY ONE MOTION IN ITS ORBIT?

According to the law of magnetic-vortexias it has many more spiral motions, one of which we will explain or clarify at present.

During its translation of its orbit the Sun makes a spiral motion towards a point in the constellation Draco, the great dragon of Greek mythology. According to mythology this dragon guards the tree on which grew the most delicious apples. Apparently if an apple could be procured from this tree and partaken of as food, one would receive great wisdom. There is real truth to this story if we apply it from an astronomical standpoint. As our civilization advances we are proceeding directly to that tree by our spiral translation. The Solar System is now being translated toward the beautiful Sun or Star, Altair, of the Eagle. Arriving at the opposite point of its orbit translating past the great regulator Regulus, the heart of the Lion, in approximately thirteen thousand and sixty-eight (13,068) years, in the great distant future. Spiraling towards the tree in the garden, around which old Laden the Dragon is coiled, challenging the strong and brave who seek the wisdom concealed within the most delicious fruit that ever grew.

We will return to Mother Earth for a while and ask another question.
